

Question	Answer	Mark	Mark scheme	Additional guidance
8	25	P1	for working with density eg $8 \times 1500 (= 12\,000)$ or $[\text{density}] \times 1500$	P marks can be awarded in either order [density] is 8×10^n Condone $8 \times 1500 \times 300$ for this mark only
		P1	for a conversion, eg “12 000” $\div 1000 (= 12)$ or $\frac{8}{1000} (= 0.008)$ or $300 \times 1000 (= 300\,000)$ or $[\text{mass}] \div 1000$	P marks can be awarded in either order [mass] must be what they believe to be mass following a calculation that uses 8 and 1500 but not 300
