

Question		Answer	Mark	Mark scheme	Additional guidance
16	(a)	42	P1	for process to find an equation in a and b , eg $a \times 2^2 + b \times 2 = -2$ ($4a + 2b = -2$) or $a \times 4^2 + b \times 4 = 12$ ($16a + 4b = 12$)	Allow one arithmetic error in elimination, eg $16a + 8b = -8$ and $16a + 4b = 12$ leading to $4b = 20$ but no subtraction sign seen
			P1	for process to find a pair of simultaneous equations and eliminate one unknown, eg $16a + 8b = -8$ and $16a + 4b = 12$ and subtraction or $16a + 4b = 12$ and $8a + 4b = -4$ and subtraction	
			A1	for $a = 2$ and $b = -5$	
			A1	cao	
	(b)	$n^2 - n$	M1	for correct method, eg n^2 seen as a term	
			A1	for $n^2 - n$ oe
