

Question	Answer	Mark	Mark scheme	Additional guidance
10	1.8	P1	process to find the amount of interest before tax eg $28.80 \div 20 \times 100 (= 144)$ OR for equation which would lead to $(x =) 0.018, 1.8$ or 1.018 eg $0.2 \times 8000 \times x = 28.8$ or $\frac{8000(100+x)}{100} = 8144$	These numerical expressions may be seen multiplied by 100, eg $\frac{144}{8000} \times 100$
		P1	process to find the interest rate eg $\frac{"144"}{8000} (= 0.018)$ or $\frac{"8144"}{8000} (= 1.018)$	
		A1	cao
