

Question		Answer	Mark	Mark scheme	Additional guidance
14	(a)	$4(p - 3)(p + 3)$	M1	for $4(p^2 - 9)$ or partial factorisation which includes the product of 2 linear factors eg. $(4p - 12)(p + 3)$ or $(p - 3)(4p + 12)$ or $(2p - 6)(2p + 6)$ or $2(2p - 6)(p + 3)$ or $2(2p + 6)(p - 3)$ or $2(p - 3)2(p + 3)$	
			A1	for $4(p - 3)(p + 3)$	
	(b)	$6m^3 + 11m^2 - 57m - 20$	M1	for a method to find the product of two linear expressions, 3 correct terms out of 4 terms, eg. $6m^2 + 2m - 15m - 5 = 6m^2 - 13m - 5$ or $2m^2 + 8m - 5m - 20 = 2m^2 + 3m - 20$ or $3m^2 + 12m + m + 4 = 3m^2 + 13m + 4$	Note that, for example, $3m - 20$ is regarded as three terms in the expansion of $(m + 4)(2m - 5)$
			M1	for a complete method to obtain all terms, at least half of which are correct (ft their first product), eg. $6m^3 + 2m^2 - 15m^2 + 24m^2 + 8m - 60m - 5m - 20$	First product must be a 3 or 4 term quadratic but need not be simplified or may be incorrect.
			A1	for $6m^3 + 11m^2 - 57m - 20$	Accept $a = 6, b = 11, c = -57, d = -20$
