

Question	Answer	Mark	Mark scheme	Additional guidance
7	Complete chain of reasoning	M1	for (area of trapezium $TQRS =$) $0.5 \times 4x \times (2x + 3x)$ or for (area of rectangle $TUVS =$) $4x \times (3x + 5)$ ($= 12x^2 + 20x$)	Evidence for the award of marks may be seen on the diagram
		M1	for (area of trapezium $QUVR =$) $4x(3x + 5) - 0.5 \times 4x \times (2x + 3x)$	
		C1	for correct algebraic processing and simplification to the given form	
		M1	Alternative 1 for ($QU =$) $3x + 5 - 2x$ ($= x + 5$)	Alternative methods may be seen.
		M1	for (area of trapezium $QUVR =$) $0.5 \times 4x \times ((\text{“}x + 5\text{”}) + 5)$ or $0.5 \times 4x \times (x + 10)$	
		C1	for correct algebraic processing and simplification to the given form	
		M1	Alternative 2 for (area of triangle $=$) $0.5 \times (3x - 2x) \times 4x$ or for (area of rectangle $=$) $4x \times 5$	
		M1	for (area of trapezium $QUVR =$) “ $0.5 \times (3x - 2x) \times 4x$ ” + “ $4x \times 5$ ”	Accept x for $(3x - 2x)$
		C1	for correct algebraic processing and simplification to the given form
