

Question	Answer	Mark	Mark scheme	Additional guidance
15	$p = \frac{5t+6}{4+2t}$	M1	for clearing the fraction eg $t(5-2p) = 2(2p-3)$ or $5t - 2pt = 4p - 6$	Condone error in expansion of RHS for this mark
		M1	(dep M1) for isolating p terms in a correct equation eg $4p + 2pt = 5t + 6$	
		M1	(dep on two terms in p of the form $ap + bpt$) for factorising eg $p(4+2t) = 5t + 6$	a and b are non zero integers
		A1	for $p = \frac{5t+6}{4+2t}$ or $p = \frac{5t+6}{2(2+t)}$ oe eg $p = \frac{-6-5t}{-4-2t}$
