

21 Vicky has a collection of medals.

The Venn diagram gives information about the number of medals in her collection where

- $\mathcal{E} = \{\text{all medals}\}$
- $A = \{\text{English medals}\}$
- $B = \{\text{gold medals}\}$

Vicky is going to take at random a medal from her collection.

Given that the medal is gold, the probability that the medal is English is $\frac{2}{11}$

Work out the number of medals in Vicky’s collection.
