

24 The diagram shows a triangular prism with a horizontal rectangular base $ABCD$.

M is the midpoint of AD .
The vertex T of the prism is vertically above M .

$AB = 14.7\text{ cm}$ $BC = 3.8\text{ cm}$ $MT = 2.3\text{ cm}$

P is the point on AB such that

$AP:PB = 5:2$

Calculate the size of the angle between TP and the base $ABCD$ of the prism.
Give your answer correct to 1 decimal place.
