

- (a) Enlarge triangle **P** by scale factor $-1\frac{1}{2}$ with centre of enlargement $(-2, -1)$
Label your image **Q**.

(2)

Triangle **P** is transformed by a combined transformation of a rotation of 90° anticlockwise about the origin followed by a translation to give triangle **R**.
Exactly one vertex of triangle **P** is invariant under the combined transformation.

- (b) Find one possible column vector for the translation.

$\begin{pmatrix} \\ \end{pmatrix}$

(1)
